

resource allocation in hierarchical pdf

on resource allocation. The main issue of cloud computing is to fix the dynamic resource allocation in order to improve the performance speed and reduce the cost, utilizing the resource efficiently. The main aim of this paper is resource allocation for virtualized cloud environments can improve the

A Hierarchical Method for Dynamic Resource Allocation in Cloud

In this paper, we propose a novel hierarchical framework for solving the overall resource allocation and power management problem in cloud computing systems. The proposed hierarchical framework comprises a global tier for VM resource allocation to the servers and a local tier for distributed power management of local servers.
